

# PCL BARCODE FLASH VERSION 3 TYPE D/E

## UPDATE AND INSTALLATION GUIDE

This document explains how to update an PCL Barcode Flash SD-Card to the PCL Barcode Flash – Hybrid Type D/E v3.04.3 or later.

[Link](#) to download latest version of PCL Barcode Flash

Compatible devices can be found within the related documentation  
[PCL\\_Barcode\\_Flash\\_Supported\\_Models-yyyy-mm-dd.pdf](#)

**Note:** This update process can be used to update an Original PCL Barcode Flash SD-media

- a) To the latest version of PCL Barcode Flash (Type D/E)
- b) To convert an existing PCL Barcode Flash SD-media Type D to Type D/E

Pre-requirement for a) and b): PCL Barcode Flash update software version 3.04.3 or later!

The printing devices will automatically choose the version (D or E) compatible to the Kyocera printer or MFP device, into which the Type D/E SD-Card media has been inserted.

To make a PCL Barcode Flash update, send the downloaded update file to the printer/MFP.

Proceed as follows:

1. Switch off the printer/MFP.
2. Insert the SD card into the SD-Card slot of the printer/MFP device.
3. Switch on the printer/MFP and wait until the device is ready.
4. Format the SD card within the device and wait until the printer/MFP is ready.
5. Copy this update file (e.g. "Update3-04-3\_Type\_D-E.capt" ) to the printer/MFP and wait until the device is ready.
6. Switch off the printer/MFP.
7. Switch on the device. The updated PCL Barcode Flash is active now.
8. You may want to verify the correct installation?
  - You can achieve this by printing a software status page.
  - To print a Status page the file "Statuspage.prn" needs to be sent to the printer.

After the successful update process the new version number of the update appears now on the status page.
